STUDENT TEAM WEEKLY REPORT

PROJECT / FEATURE	TEAM & MENTOR	WEEK / LEADER
Question Bank & Quiz Engine Subject, Syllabus and Question Bank Structure	**TEAM ID:** 1 **FACULTY MENTOR:** Mr. Rudragouda Patil	**WEEK ENDING:** 16/08/2026 **STUDENT LEADER:** Varad Tanawade

WORK COMPLETED	CHALLENGES / RISKS	HELP NEEDED
• Defined the syllabus hierarchy using `subject`, `unit`, and `topic` tables, with units linked to subjects and topics linked to units. • Outlined question-bank records with subject, unit, topic, author, reviewer, academic-year, type, status, and target-division fields. • Connected question records to topics and authors, and provided fields for moderators, question type, Bloom's taxonomy level, marks, and status. • Included timestamps for creation and last update to support record maintenance and traceability. • Mapped syllabus-linked questions as the basis for selecting reusable questions by subject and topic. **Evidence: Subject/unit/topic DDL; question and question_bank field definitions; foreign-key relationship mapping.**	**Amber:** The schema does not yet define explicit syllabus-version history or chapter/topic question quotas. **Amber:** question_bank currently requires a single question_id; confirm whether one bank should contain multiple questions. **Green:** The basic subject-to-unit-to-topic hierarchy is represented.	**Technical Guidance Request:** Confirm the intended one-to-many structure for question banks, syllabus versioning, and quota validation by topic or unit.

INTEGRATION AND COLLABORATION

- Mapped subject and syllabus keys to the question and question-bank records.
- Shared the author/reviewer relationships with the user-role and moderation workflows.
- Identified syllabus versioning and question quota handling as further requirements, not established schema features.

COMMON KPI EVIDENCES

- Defined subject, unit, and topic entities with referential links.
- Specified question-bank ownership/review fields and target-division metadata.
- Mapped questions to syllabus topics and academic-year context.
- Recorded design gaps for version history, quotas, and question-bank cardinality.

NEXT WEEK COMMITMENTS	MENTOR RESPONSE
• Complete question metadata and answer-option relationships. • Define moderation statuses and rejection-reason handling.
