STUDENT TEAM WEEKLY REPORT

PROJECT / FEATURE	TEAM & MENTOR	WEEK / LEADER
Question Bank & Quiz Engine Question Metadata, Options and Moderation	**TEAM ID:** 1 **FACULTY MENTOR:** Mr. Rudragouda Patil	**WEEK ENDING:** 21/08/2026 **STUDENT LEADER:** Akansha Dhage

WORK COMPLETED	CHALLENGES / RISKS	HELP NEEDED
• Extended the question model with explanation, reference text, rejection reason, and question-bank linkage fields. • Defined `question_option` to store option text and an `is_correct` flag for objective questions. • Included author and moderator references, question type, Bloom's taxonomy level, default marks, status, and update timestamps. • Mapped review-related data needed to distinguish draft, approved, or rejected content and record a rejection reason. • Identified MCQ and true/false support in the schema; short-answer and essay grading need corresponding application workflows. **Evidence: question and question_option DDL; explanation/reference/rejection fields; author/moderator foreign-key definitions.**	**Amber:** question.question_bank_id is not declared as a foreign key in the supplied DDL. **Amber:** Application rules are needed to ensure that an objective question has valid options and an unambiguous correct answer. **Green:** The main question metadata and option storage fields are present in the schema.	**Technical Guidance Request:** Review the question-to-bank relationship, allowed status transitions, and validation rules for option-based questions.

INTEGRATION AND COLLABORATION
• Aligned question identifiers with question_option and later quiz_question mappings. • Connected author/moderator references to the shared user table. • Shared metadata needs for answer review, explanations, and moderation feedback with the quiz and result workflows.

COMMON KPI EVIDENCES
• Specified metadata for question type, BTL level, marks, explanation, reference, and status. • Defined option storage and correct-option indicators for objective questions. • Captured author/moderator references and rejection-reason fields. • Documented relationship and data-validation checks for the next implementation stage.

NEXT WEEK COMMITMENTS	MENTOR RESPONSE
• Define quiz and quiz_question records, including ordering, assigned marks, duration, and randomization. • Review how question-bank ownership and question-level mappings should be enforced.
