STUDENT TEAM WEEKLY REPORT

PROJECT / FEATURE	TEAM & MENTOR	WEEK / LEADER
Question Bank & Quiz Engine [Integration — Subject & Syllabus Management: Frontend, Backend & Database Integration]	TEAM ID : **2** FACULTY MENTOR: Mr. Rudragouda Patil	WEEK ENDING: 11/08/2026 STUDENT LEADER: Pratiksha Chavan.

WORK COMPLETED	CHALLENGES / RISKS	HELP NEEDED
• **Admin UI–API Integration:** Reviewed in code that the Admin "Subject & Syllabus" screen (admin.html) loads and saves subjects through the backend /api/subjects endpoint (GET/POST) in JSON: code, name, department, description, assigned authors and moderator. • **Database Sync:** Traced the /api/subjects upsert into the PostgreSQL subject table (subject_code, subject_name, department, syllabus_version, assigned authors/moderator) and the related migrations in DBConnection.java. • **Chapters, Topics & Quotas:** Traced the chapter / topic / quota structure from the admin form through /api/subjects into the server-side subject registry and back into the syllabus view. • **Syllabus Versioning:** Traced the version value from the admin form (auto-incremented on update) to subject.syllabus_version; syllabus_version / syllabus_section columns added to question and question_bank. • **Question–Syllabus Mapping:** Connected the chapter, syllabus_version and syllabus_section fields of create-question-bank.html to the payload posted to /api/question-banks.	• **Schema Mismatch:** Database.sql defines subject without subject_code, which the backend upsert expects; DB write errors are caught silently, so subjects may not persist in PostgreSQL. Fix pending. • **Chapters/Topics/Quotas Not Persisted:** Held only in server memory and browser storage; the syllabus_chapter table exists but is never written. • **Mapping Not in DB:** Chapter and syllabus_section are saved inside the in-memory question-bank record; no backend code populates the question-table columns. • **Quota & Version Limits:** Quota progress is display-only (no server-side enforcement); only the current version is kept, with no version history.	• Need a decision from the Backend and Database teams on the single source of truth for chapters, topics and quotas: the syllabus_chapter table or the unit/topic tables in Database.sql. • Needed before the end-to-end syllabus test planned for next week.

INTEGRATION AND COLLABORATION	COMMON KPI EVIDENCES
Interfaces Used: REST /api/subjects (GET/POST) and /api/question-banks (GET/POST/DELETE) with JSON payloads; PostgreSQL via JDBC (subject table). **Components Received (not developed by Integration):** • **Backend team —** SyllabusService interface and Subject, Unit and Topic models. • **Database team —** subject, unit and topic tables in Database.sql. • **Frontend team —** Admin syllabus screen and question-bank form. **Open Dependencies:** Schema alignment for subject; persistence of chapters, topics and quotas. **Pipeline Learnings:** Syllabus data currently flows Admin UI → /api/subjects → in-memory registry (+ subject table for subject-level fields); chapter-level data does not yet reach PostgreSQL.	• **Foundational Behavior:** Schema migrations use IF NOT EXISTS, so restarts are safe. No latency/CPU measurements recorded this week. • **Continuous Integration:** Backend syllabus commits reviewed. • **Evidence:** admin.html, AppServer.java (SubjectsHandler), DBConnection.java, create-question-bank.html. Runtime test of the syllabus flow not yet recorded.

NEXT WEEK COMMITMENTS	MENTOR RESPONSE
• **Shruti Chavan:** Align the subject table schema across Database.sql and the backend. • **Kartik Manoj:** Persist chapters, topics and quotas through /api/subjects to the database. • **Anagha Thavkar:** End-to-end test of subject creation, versioning and question mapping, with results recorded. • **Pratiksha Chavan:** Update the integration README to match the endpoints actually served.
