STUDENT TEAM WEEKLY REPORT

PROJECT / FEATURE	TEAM & MENTOR	WEEK / LEADER
Question Bank & Quiz Engine Analytics and Reporting - Data Mapping	**TEAM ID:** 1 **FACULTY MENTOR:** Mr. Rudragouda Patil	**WEEK ENDING:** 28/09/2026 **STUDENT LEADER:** Ved Panchwadkar

WORK COMPLETED	CHALLENGES / RISKS	HELP NEEDED
• Mapped dashboard metrics to quiz and result data: participation, average score, pass rate, and completion rate. • Identified source entities for analysis, including quiz_attempt, student_answer, quiz_question, question, topic, unit, and subject. • Documented report dimensions for student-wise, class/division-wise, subject-wise, quiz-wise, and question-wise summaries. • Outlined question accuracy, difficulty trends, weak-topic identification, and comparison across quiz cycles as reporting requirements. • Reviewed gaps: the supplied SQL does not define analytics tables or report queries, and the current student_answer constraint must be addressed for accurate per-question analysis. **Evidence: metric-to-table mapping; report dimensions; list of derived aggregations and outstanding schema/query dependencies.**	**Amber:** Participation, pass rate, completion rate, and question accuracy require agreed definitions and aggregation queries. **Amber:** Historical trend analysis depends on reliable attempt timestamps and corrected per-question answer cardinality. **Green:** The source tables needed for an initial reporting layer are identified.	**Technical Guidance Request:** Confirm metric formulas, division/class grouping rules, and export expectations for PDF or spreadsheet reports.

INTEGRATION AND COLLABORATION
• Mapped quiz and answer records to subject/unit/topic fields for syllabus-level reporting. • Identified where administrators and teachers need different report filters and access permissions. • Shared unresolved result-schema issues that may affect accuracy of question effectiveness metrics.

COMMON KPI EVIDENCES
• Defined four dashboard measures: participation, average score, pass rate, and completion rate. • Mapped student, division, subject, quiz, question, and topic report dimensions. • Identified data sources for question accuracy and topic-level performance. • Recorded that report generation/export and trend calculations remain to be implemented and verified.

NEXT WEEK COMMITMENTS	MENTOR RESPONSE
• Perform a security and audit review of the supplied schema. • Prioritize schema corrections and validation tests before treating analytics outputs as reliable.
