STUDENT TEAM WEEKLY REPORT

PROJECT / FEATURE	TEAM & MENTOR	WEEK / LEADER
Question Bank & Quiz Engine [Subject and Syllabus Management — Frontend]	**TEAM ID: 2** **FACULTY MENTOR:** Mr. Rudragouda Patil	**WEEK ENDING:** 05/10/26 STUDENT LEADER: Rajnandini MAne

WORK COMPLETED	CHALLENGES / RISKS	HELP NEEDED
• **Security & Session Controls:** Reviewed RBAC portal guards auth headers, audit-event triggers, the 15-minute inactivity/logout watchdog, and login UI feedback (lockout/reset flows). • **Student Quiz Controls:** Reviewed question randomization, tab-switch/focus tracking and the 3-strike integrity flag/auto-submit system. • **Admin, Author & Moderator Screens:** Reviewed audit logs (filtering/CSV export), role management, grading UIs, audit calls for quiz/question edits, and moderator self-moderation blocks.	**Password security:** Password hashing must be implemented and verified on the backend; the frontend should submit credentials securely and must not implement its own password storage. **Anti-cheating limits**: Browser focus/screen-switch detection can flag events but cannot guarantee prevention. Test warnings, strike counting, and auto-submit behavior. **API consistency:** Confirm token expiry, unauthorized responses, lockout/rate-li	• I**ntegration-team** confirmation of authentication/token rules, protected endpoints,password hashing, and account-lockout behavior. • **Backend** support to verify audit-log persistence for login edits,publishing, grading,and deletion event

INTEGRATION AND COLLABORATION
•Coordinate with backend/integration team to validate Bearer-token authentication and access restrictions for protected API requests. • Verify audit-event delivery and persistence with backend services; check frontend error handling for denied or rate-limited requests. • Run role-based checks across administrator, author, moderator, and student screen

COMMON KPI EVIDENCES
• Shared frontend session-security utility includes role guarding, authentication-header helper, audit logging, and inactivity timeout logic. • API client includes a common request wrapper and handling for authentication/rate-limit events. • Student interface contains question-shuffle and browser visibility/focus monitoring controls

NEXT WEEK COMMITMENTS	MENTOR RESPONSE
• Test role guards, login lockout/countdown, session timeout, and token/error handling. • Verify audit events for login, question edits/deletions, quiz publishing, and grading with backend persistence. • Test question randomization, screen-switch warnings, strike handling, and quiz auto-submit
