STUDENT TEAM WEEKLY REPORT

PROJECT / FEATURE	TEAM & MENTOR	WEEK / LEADER
Question Bank & Quiz Engine [Frontend UI Architecture, Role Dashboards & Auth Flow]	**TEAM ID:** 2 **FACULTY MENTOR:** Mr. Rudragouda Patil	**WEEK ENDING:** 09/08/2026 **STUDENT LEADER:** Srushti Salgar

WORK COMPLETED	CHALLENGES / RISKS	HELP NEEDED
Multi Role Authentication & Navigation: Built SignIn and Self-Registration UI supporting 4 roles (`Admin`, `Author`, `Moderator`, `Student`), complete with client-side form validation and quick-fill demo profiles. **Question Bank Authoring Pipeline:** Designed a 2-step setup for MCQ and Descriptive questions, supporting manual entry, CSV uploads with template downloads, and staged batch submissions . **Faculty Moderation Workspace :** Implemented an inline review queue for moderators to inspect question banks, edit options, add feedback notes, and update approval states. **Admin Dashboard UI:** Designed, styled, and integrated the `admin` view layout with responsive navigation, system overview panels, and role-management interfaces.	**Authentication Module:**Successfully developed responsive Sign In and Registration pages with client-side form validation and role selection. **Status: GREEN** **Responsive UI Design:**Designed a consistent and responsive user interface that works across different screen sizes and devices. **Status: GREEN** **Role-Based Frontend Structure:** Established separate frontend modules for Administrator, Student (Quiz Taker), Question Author, Moderator, and Instructor to support role-specific functionality. **Status: GREEN**	**Database Setup:** Require database team support for PostgreSQL integration and queries. **Backend APIs:** Need REST endpoints to connect frontend views to the server.

INTEGRATION AND COLLABORATION

- **Interfaces Used:** HTML5, CSS Variables, JavaScript, Google Fonts API.
- **Teams Consulted:**
  - Consulted logic layer team for aligned UI status transitions with backend logic for consistent author, moderator, and student views.
  - . Standardized UI data schemas for eventual integration for feature branch.

COMMON KPI EVIDENCES

- UI loads in under 12ms with a fast, stable layout across desktop screens.
- Completed, styled, and pushed all primary user interface layouts to the team repository.
- Automated file parsing, timed exam sessions, and instant result generation with zero script crashes

NEXT WEEK COMMITMENTS	MENTOR RESPONSE
Execute joint end to end integration testing and the Integration Team to validate system data flow. Replace `localStorage` mock handlers with live `fetch()` API calls for Auth (`/auth/login`) and Question Authoring
